MODELS AFFECTED

**P12246T**

SUBJECT

**P12246T SWITCHES**

Pacbrake switch part #P12246T was designed for use as a cab mounted throttle or clutch switch. Recently this switch has seen installation on the engine as a throttle switch. Most common on exhaust brake installations.

This practice is not advisable because engine vibration shortens the life of the switch. If it is used as a throttle switch, to minimize vibrations, it should be mounted on the cab engaging the throttle linkage.

In the event that a switch must be engine mounted, use Pacbrake part #P01495 as a universal application or consult the Pacbrake factory.
