P39090 UPGRADE KIT

APPLICATION

PACBRAKE MODEL P-39/P-39A

The P39090 upgrade kit contains a complete P39008 housing assembly. This replacement housing is equipped with the latest Paclash adjustment screws that are identified with the letter “P” engraved on the top. Four additional Paclash screws are provided to up-date the two original housings on the engine. Installation and adjustment instructions are provided as all six Paclash screws require a revised setting and a new procedure for the adjustment. (See adjustment sheet L5278)

If this upgrade is covered under Pacbrake warranty we require the housing and all the screws removed from the other housings. A Pacbrake Dealer Claim Form with all the necessary information including all housing serial numbers is required.

A service information decal is included which MUST be applied to the valve cover spacer near the engine specifications decal. Prior to beginning any engine brake service determine if the engine has been upgraded with the new parts. This is a product improvement and not subject to a campaign.
